

Why Google Chrome Is More Than A Browser

As a computer desktop web browser Google Chrome has positioned itself as an industry leader. Yet, it offers so much more! Google Chrome is available as a free app on both iOS (iPhone, iPad) and Android devices – both smart phones and tablets. Because of this, its versatility is nearly unmatched among web browsers. Additionally, apps and plug-ins can be installed to Chrome to extend its usefulness beyond web browsing. If you do not have Google Chrome installed, you can

download it for free from [Google.com/chrome](https://www.google.com/chrome). Once you have Chrome installed you can access the apps by clicking on the apps button at the bottom of the screen. You can download new apps from Google by clicking on the web store button included in the apps or at the bottom of the window. The Chrome Web Store has many different categories of apps to choose from. Each one of these categories has many apps. If you are interested in an app, click on it and it will bring up more information for that app including the following: cost, reviews for the app, pictures and a short clip of the app, details, and related or similar apps. If you like the app simply click the ADD TO CHROME button and it will install it on your computer. Most of the apps included in the Chrome Web Store are free, however they will usually contain advertisements. We recommend that you read the reviews before downloading apps to make sure they work correctly and will not harm your computer.
