

How to move Mozilla Firefox bookmarks to a new computer.

1. On the computer that contains your bookmarks, open your Firefox.

2. Click the orange Firefox button on the top left hand corner.

3. Click "Bookmarks."

4. In the library window that is now open, click the "Import and Backup" button.

5. Click "Backup..."

6. In the browse window that opens navigate to the location that you would like to save your bookmarks. (A flash drive would be a good choice to move bookmarks to a new computer.)

7. Click save.

8. At the new computer with the flash drive, follow steps 1 through 4 above.

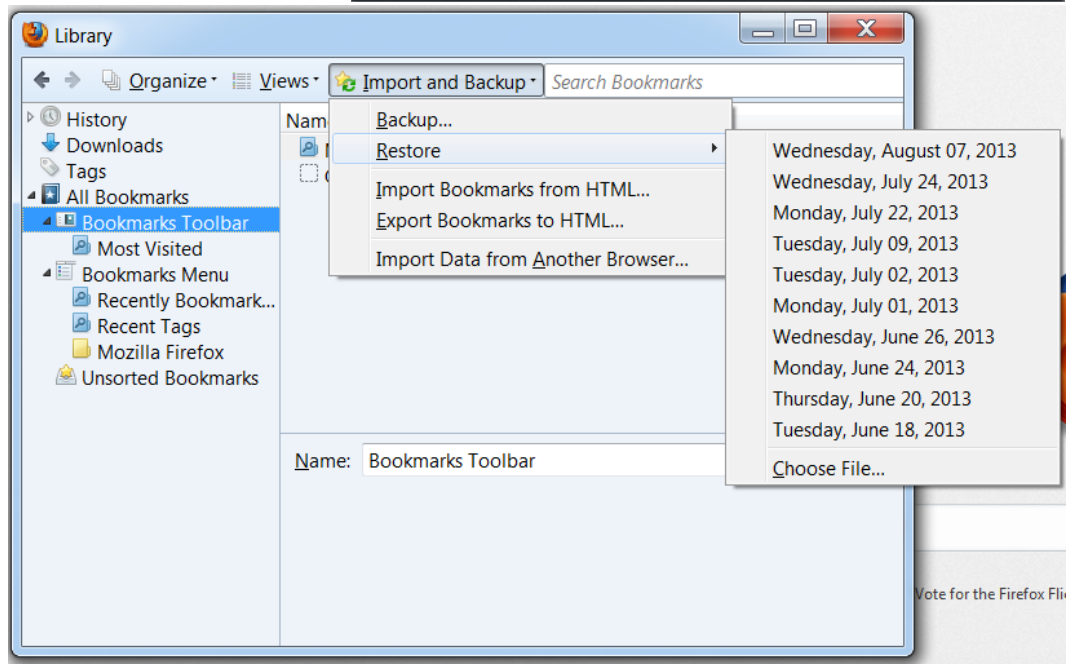

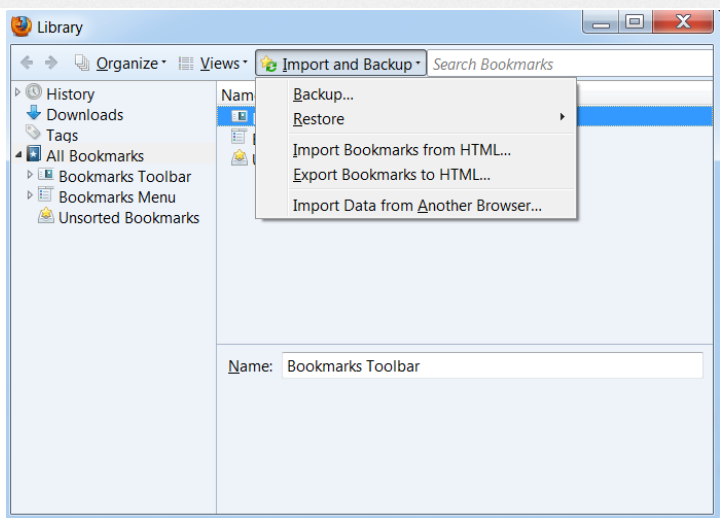

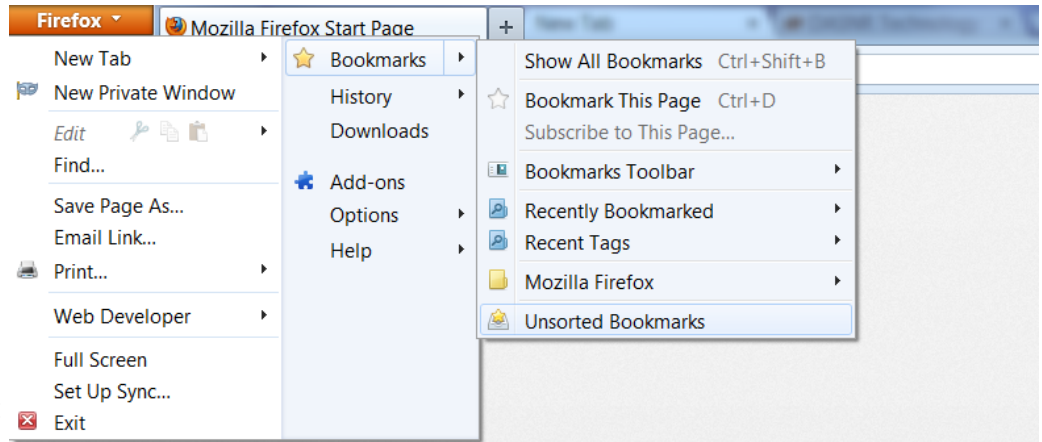

9. Click "Restore."

10. Click "Choose File..."

11. Browse to flash drive and choose the file containing your bookmarks.

12. Click "Open."

This process will delete all the bookmarks that are currently on the computer and replace them with the bookmarks from the first computer.
